## EXPERIENCE

### Full Stack Engineer

October 2024 – Present

#### Guestara

Pune, India

- Led end-to-end revamp of the guest check-in module with upsell and integrated payment flows, lifting upsell conversion **35%** and tripling check-in completion; added **UIDAI** and **OCR** identity verification, cutting verification time **60%**
- Re-engineered the automated guest-messaging (journey) module from the ground up, eliminating missed and duplicate sends and making scheduled guest campaigns reliable at scale
- Unified **Facebook**, **Instagram**, and **LINE** messaging into a single inbox, cutting average guest response time **50%**
- Drove agentic AI development adoption with **Claude Code**: authored team code conventions and AI-workflow practices, and built an internal **MCP server** used by the team, improving shipping velocity by **40%** and cutting repetitive manual coding effort by **80%**
- Refactored API and database access paths and fixed long-standing UI defects, cutting user-reported issues **70%**; owned issue escalation across the platform, closing the gap on missed guest tickets

### Web3 Frontend Engineer Intern

March 2024 – April 2024

#### Laika AI

New Delhi, India

- Shipped Chrome Extension views surfacing NFT holdings for any connected Web3 wallet
- Built React and Recharts dashboards for on-chain portfolio insights, driving a **1.5x increase** in extension engagement

### Freelance Software Engineer – Contract (part-time)

August 2023 – Present

#### Various clients

Remote

- Built a comprehensive web application for a 5,000+ gamer esports community, featuring real-time leaderboards, performance analytics, and social features using React and Node
- Automated deploys to an Apache/Linux VPS with GitHub Actions, cutting release time **50%**

### Full Stack Engineer

August 2022 – April 2023

#### BlobCity

Mumbai, India

- Enabled real-time monitoring, remote power control, and GPU tier adjustments for cloud-book management in Angular, cutting task-completion time **66%**
- Migrated the platform's data-visualization layer to a new charting library, cutting dashboard render time **50%**
- Modified NodeJS and Java APIs to facilitate token updates and validation, resulting in a **33% reduction in unauthorized access** attempts and ensuring all requests are authenticated

### Frontend Engineer Intern

November 2021 – February 2022

#### Comprinno Technologies

Bangalore, India

- Built interactive Angular single-page applications for Tevico, the company's cloud-audit product

## SKILLS

**Languages:** HTML, CSS, JavaScript, TypeScript, Node, Python, Java

**Technologies / Frameworks:** React, Angular, Bootstrap, Tailwind, Vite, Next, Express, Nest, Spring, REST API, MySQL, MongoDB, Selenium, Git, Postman

**Cloud / Infra:** AWS, Google Cloud, Vercel, Docker, Redis, CI/CD, Linux

**AI Tooling:** Claude Code (agentic coding), Cursor, MCP servers, AI-assisted workflows

## PROJECTS

### Ampersand Discord Bot | Bun, TypeScript, Lavalink, MongoDB, Valkey, Docker

- Built a Discord music bot on Bun and discord.js v14, streaming audio through a Lavalink pipeline with a plugin auto-discovery command loader
- Backed by MongoDB and a Valkey cache layer; deployed as a multi-stage Alpine Docker build **achieving 99.9% uptime**

### auto-wellfound-python | Python, Selenium, Docker, GitHub Actions

- Automated Wellfound job applications with Selenium, filtering roles by skill, seniority, and location, with DB-tracked run history
- Ships per-run email reports; packaged with Docker Compose and GitHub Actions CI

### pathbin | PowerShell, winget/apt

- Idempotent dev-machine bootstrap from a single manifest, provisioning Windows (winget) and Linux/WSL (apt) alike
- Custom handlers for toolchains outside winget/apt coverage, including Rust (rustup), Node (nvm), and Bun

## EDUCATION

### Hislop College, Nagpur University

July 2018 – September 2021

Bachelor of Commerce and Computer Applications (BCCA) - CGPA: 7.5

Nagpur, Maharashtra
